

## Zenith Circular Vibrating Screen

Circular Vibrating Screen is used to separate the stuff. The vibrating screen is composed of main frame, screen web, electric motor, eccentric bock, rubber spring, and coupler. We will offer suitable type according to your requirements.

The Circular vibrating Screen moves on a circular motion. The vibrating screen is a multi-layer and high efficient vibrating screen. Advantages are: stable structure, strong exciting force, high efficiency, little noise pollution, handy maintenance and safety; circular vibrating screen has been widely used in mine, construction, transportation, energy and chemical industries.

The zenith circular vibrating screen consists of screen box, supporting device, vibration exciter, transmission part, etc. The

barrel-type vibration exciter is installed in the middle part of the machine. During normal operation, the vibration of exciter will drive the screen mesh fixed on the screen box vibrate, and then materials will be screened. The big and small materials fall from the upper side and lower side of the screen to get them separated.
